MADE WITH TUFFAK PC

Polycarbonate and Acrylic Sheet

#### PRODUCT DESCRIPTION

TRU-ESD products are manufactured utilizing a proprietary, patented sputter coated process. This process allows for the ESD coating to be atomically bonded to the surface of the substrate. This patented technology allows for a product delivering superior performance and visual appearance. These products are designed to prevent static charge generation on the sheet surface which diminishes/reduces, etc. particulate attraction and prevents electrostatic discharge events.

#### **KEY ATTRIBUTES**

- Outstanding ESD performance:
  - Surface Resistance: 10<sup>5</sup>-10<sup>7</sup> Ohms
  - Surface Resistivity: 10<sup>6</sup>-10<sup>8</sup> Ohms/square
- Abrasion resistant
- Amazing clarity/transparency
- Superior chemical surface resistance
- Electrostatic decay in less than 0.05 second per MIL-STD-3010, Method 4046
- Humidity independent static charge control
- Cleans with IPA for easy maintenance
- Excellent uniformity
- Can be fabricated into flat and formed surfaces
